Advanced Programming Techniques

What Happened During The Project

1) A design on paper was first created for the web page to be created.

2) Then research was done on the internet for the project and the information I needed was received.

3) Anasayfa design: the home page contains a list of books, such as the database.We can filter these books according to the given buttons or question a desired author.Our homepage is also available to direct to other pages. These are: homepage, admin, quick access, view books, communication, attention.

4) Admin page design: I was planning to add and remove books with admin entry in this section but I could not.

5) Hızlı Erişim page: The contents of the quick access page has frequently asked questions and access to other pages, such as considerations and communications.

6) Kitapları Görüntüle page: the books in our library are shown to the user with pictures and the user can select the books according to their types.

7) İletişim page: this page to communicate with the user library management name, e-mail and message information is entered.

8) Dikkat page, gives information about the allowed and not allowed behaviors in the library.
